

QUALITY MADE IN USA 

Why Buy VAPORIZER™ Calcium Chloride vs. Chinese Imports?

There are many reasons why VAPORIZER™ Calcium Chloride Pellets should be considered as a first choice for deicers. VAPORIZER™ has been the industry standard for Ice Melt Removal Professionals for 23 years!

PERFORMANCE: Calcium Chloride pellets or flake from import sources can vary in “assay” (chemical composition of the pellets), depending on which foreign plant makes it. Most imports come from China, but can often be sourced from Mexico or Russia. VAPORIZER™ Calcium Chloride has a minimum of 90% CaCl₂, with large pellets to provide optimal ice melt performance. Import pellet assay can be as low as 77% CaCl₂ and provide much less ice melt power. *Ask suppliers to confirm the assay of their products, and don't assume products are equivalent.*

SUPPLY CHAIN: VAPORIZER'S Calcium Chloride are manufactured in Ludington, MI and packaged in Retsof NY and Plainfield, CT, making them readily available in the Northeast states. Imports can take anywhere from 6-8 weeks to arrive by boat. Inventory for the season has been sitting on the ground in outside storage for long periods and often in sub-standard packaging. Make sure you're aligned with a supplier who has good stock AND can make and ship quickly.

MADE IN USA: VAPORIZER™ is proud to carry OxyChem's Calcium Chloride which is made in the USA with Union labor. OxyChem is the ONLY manufacturer of Calcium Chloride pellets in the US, and PELADOW™/VAPORIZER™ Calcium Chloride are the ONLY pellet which meets all “Made in America” requirements for federally funded state DOT projects. VAPORIZER™ Calcium Chloride products support compliance with the Buy American provisions of the American Recovery and Reinvestment Act of 2009.

PACKAGING & QUALITY: Import bags are often not designed for long-term exposure to the elements. Moisture permeating the bags will result in lumps and hard bags. Broken bags may seem trivial, but a few broken or hard bags is money and environmental waste, and offsets price differentials. VAPORIZER™ Calcium Chloride Pellets are made with the highest quality bags, shrink-wrapped and shrouded. This system is vastly superior to common import packaging and helps to ensure that material is sold to you and your customers in prime condition.

PRICE: Consider that import material may be on “fire-sale” because of exposure and desperation for payback on investment. Do you really know “what's in the bag” and the chemical impurities/quality issues that come with unknown sourcing? Is your company reputation at stake if you deliver product you may regret later to save a few pennies?

ASSURANCE: OxyChem's manufacturing plant has been producing Calcium Chloride for over 100 years. We are committed to our market place and have the highest quality distribution partners. You can be SURE that you're getting what you paid for with the highest quality and nationally recognized brand-name in deicers!
